DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Farley.

As per claims 1 and 6, Farley discloses a method of interpreting X inputs (the 3 binary inputs of Figure 9) for a multi-stage HVAC system to control Y stages of the system (the 8 stages of Figure 9), where Y is greater than X (i.e., 8 vs. 3) comprising the steps of receiving input from the X inputs and translating them into a binary system having Y binary outputs (the 8 binary numbers listed in Figure 9); and controlling the system based on the binary outputs (control of C2, C1, H1, H2, and H3 as shown in Figure 9).

As per claims 2 and 7, if one looks only at the cooling portion of Figure 9 (i.e., when the first binary digit is always zero), there becomes 2 inputs (the two right binary digits) and the binary outputs are operated according to 0, 1, 2, or 3 stages (top 4 equivalent base 10 numbers as shown in Figure 9).

As per claims 3-5 and 8-10, Farley discloses the stages being vapor compression circuits for both heating and cooling stages (column 6, lines 48-52).

As per claim 11, Farley discloses system input members 19, 20, and 23 as shown in Figure 1.
